

The **Village of Barrington Hills** will be performing asphalt rejuvenating maintenance on your village roads. Please be advised that the contractor, CAM, LLC, is scheduled to begin work on your street starting **Aug 24th**.

During this time, there will be temporary parking restrictions and limited access to your street while work is in progress. We ask that you observe posted “No Parking” signs and avoid driving on the treated surface until the road has reopened.

NO PARKING

****No On-Street Parking****

Starting Monday Aug 24th Thru Wednesday Aug 26th

(7:00 AM – 7:00 PM)

NO PARKING

If you have garbage cans on the street, please place them up on the curb, front lawn, or sidewalk. If you have a lawn sprinkler system that sprays or drains onto the street, please turn it off on the day work is performed and for one day afterward. We also ask that you avoid discharging sump pumps onto the street during this time.

**** This treatment is weather dependent, if the forecast calls for rain, operations will be delayed ****

Treatment FAQ:

Why is this product being applied to my road? CAM, LLC will be applying Reclamite Maltene based Rejuvenating Agent to your roads. Reclamite is a product designed to extend the life of the pavement by sealing the pavement from the elements. This penetrating sealer is the most widely used pavement rejuvenator in the market for over 50 years and will assist in minimizing the need for more costly and disruptive methods of street repair.

How long does the process take? Once our small crew begins work on your street, the process will usually only take one to two hours. Please obey all signs and crew directions. Once the road has been treated with lime screenings, the road will be fully opened to traffic.

When can I drive on the road? You can exit your driveway and drive through the work area, but please go slow and stay in the area treated with sand/screenings. Please be advised that driving onto a driveway before the contractor is finished applying the limestone/sand may cause vehicle tires to track some of the product onto driveways and sidewalks. These markings are not permanent and will naturally fade within a few weeks.

When will the road be cleaned up? After the rejuvenating product is applied, a temporary layer of limestone screenings will be placed on the roadway. This layer is not permanent and will be swept up within one to two days.

These agents are environmentally safe and extend the pavements life. If caution and reduced speeds are taken when driving on recently treated roadways, the transfer of material from the roadway to your vehicle is unlikely. If you do have product that has been transferred to your vehicle, it is noncorrosive and will not damage your vehicle. A bug and tar remover (available at any local auto parts store) will safely remove any material on your vehicle. Please collaborate with us through any inconveniences during the application process.

Thanks for your patience, CAM, LLC
